

Main things needing done

Nothing!

Would be nice to do but not required

For gabest11 karokes. Possibly look at alignment and timing. Originally the kanji and romaji were not in the correct order compared to E-F/R-F so I manually moved the romaji above the kanji for 1-60. In Op1, gabest11 decided to do the “final” version of the karaoke. It’s overall a great improvement since in the early episodes, E-F didn’t even include the kanji until episode 13. One change I made is for the Romaji, gabest11 had MS PGothic but just MS Gothic seems a much better fit (all fonts to 30 as the 28 they had is too small on overlay). Older E-F is basic Arial but the final version in 30 is MS Gothic. Maybe look at changing font based on the episode.

For Op2, I changed the font sizes to match E-F/R-F (from 36 to 37.5 for Wordy Diva etc) and line thickness on a per episode basis. I also went through every episode and did the same translation as E-F/R-F. This changes about 3 times from 31-60 but maybe it’s better to pick a standard translation. The switch from Wordy Diva to Pristina in episode 40 onwards (R-F switchover episode) has been done. I also bolded 40, 53 and 58 as that seems to be what R-F did but maybe switch this to non bold to all be the same.

I also noticed the way gabest11 did karaoke is different. The style was not like E-F/R-F. If you check opening 2/ending 4 for example, gabest11 did the classic way of karaoke but E-F/R-F did “instant” karaoke. Hard to explain but once you see it, very easy to notice. I put all this under another section because I do want to honour the work gabest11 did and keep it as is. I definitely wouldn’t be doing this if most of the intros and endings hadn’t been done.

Episode 46, 52 and 58: These are non sync friendly episodes. Consider changing intro karaoke timing for some lines. I think it's actually just a visual frame change rather than the audio so maybe it doesn't even need to be looked at. Noting this down anyway.

Make sure the ending 64 karaoke timing is good for episodes 65 to 74. It seems fine to me (within a frame but thought I'd note it down). Regardless it's much better timing now than what R-F had thanks to llbx retiming.

Starting page 4 is old signs I wasn't totally sure about/had notes for. Maybe look at these to make sure they are good. Thankfully, llbx ended up fixing most of them.

Probably never needed, basically crazy

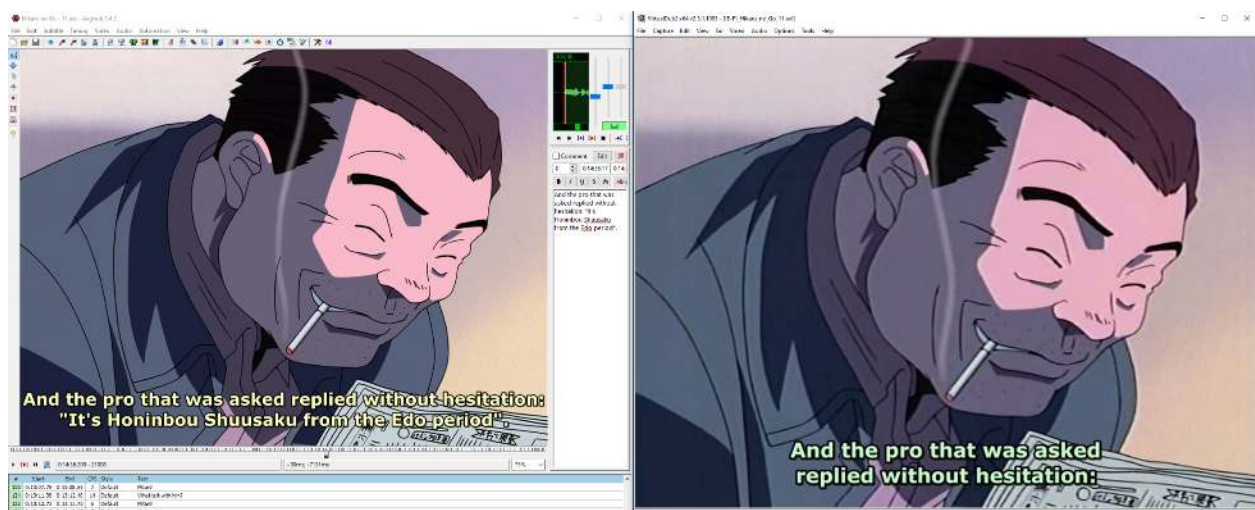

If looking for total completeness, consider adding E-F/R-F group credits to intros but these change basically every episode. I only did episode 1 to make sure I had the font added. I did all the staff intro and ending VA credits starting from episode 61 (when FANTASY intro started as that's when R-F started doing them).

Below is old stuff. Keeping for nostalgia.

Check gabest11 subs from 11 onwards to make sure they match E-F/R-F (and style properly). Here is an example of why checking is needed. When doing episode 10 there is a glaring error. It should be "you're a Go club member!" especially in the context of what they are talking about.

In episode 11:

Some things are put over 1 line when E-F did it over 2 dialogue lines. Obviously took this before styling set to Background, just what I initially encountered and why going over all the episodes needs to be done.

Signs throughout episodes needing done/looked at again

Just needs to be checked, scrolling speed etc

Sort of done, needs tweaks/scrolls/boxes etc

Not started

24: 2:35: scrolling sign with box reveal. Looks fine to me.

27: 10:36: Fixed basketball text from what gabest11 had.

30:

3:00: Japanese Go Institute moving sign. Scroll needs looked at. I ended it on the right frame here (E-F was too early).

20:10: Look at scrolling for the signs. Needs improved but pretty close to R-F.

35: 10:02: Hard sign to do well. I just colour picked what E-F had but maybe look at it again.

37:

9:27: Hard sign to do. It's moving plus font enlargement as it happens. Looks fine I think. Also matched the 89 frames.

12:20 Moving sign. E-F was pretty bad on this. I tried to match it but then llbx fixed it. Left my commented line in.

19:24: More scrolling text. It kind of works due to the computer scrolling speed.

41: 11:44: Slight moving text. I did it but maybe it needs looking at again. Doesn't look like font resizement but I did that. (similar to 44 11:06).

42:

7:33 and 7:38: Sign. Hard to place this properly. I'm pretty bad with this but it looks ok. Maybe I put it too "deep" not sure. Considered switching these to white but think the default note colour is fine.

15:11 Sign needs looked at maybe.

44: 11:06: Sign. Done but this was really hard to match and move.

46:

2:38: Moving sign. Not exactly near R-F but it looks good to me. I couldn't tell if they had colour picked from the wall or just did 1a&HFF&. Not sure between frz326 and 325 so frz325.5 seems ok. Could maybe slightly move it more to the right by 2 pixels or so and look at height. Picking a bord and shad value was also difficult.

14:30: I find these signs with multiple x y z tags difficult to know if it's good or not. Wasn't sure on bord or shad value but asked llbx who said to do bord0/shad1.2.

47:

2:44: NcDonalds sign. Couldn't match this at all. Needs some refinement in frx/fry but I think the basic approach looks better anyway. Definitely better colour choices.

8:03: It's really hard for me to properly match stuff like this. It looks ok I guess but placement is bad. frx/fry/fscx/fscy tags here?

9:55: I did the basic stuff but getting this to look right was hard. Needs some frx/fry. Done with help from llbx.

10:15: Did with help from llbx. Very nice. See 48: 2:08

17:05: Good initial placement of sign and animation looks ok. Much cleaner than R-F I think. Having fry6 looks ok (also agreed by llbx).

48:

2:08: Basically the same as 47: 10:15 but on for 1 frame less.

5:02: Done this but need to make sure the scroll looks good.

5:09: They definitely didn't mask this and it's just a lot of trial and error to make it look good as the guy walks over it but maybe a mask would be ideal. I also know there isn't a shadow on R-F but due to the Blu-Ray colours, the white outline kind of gets lost so I decided to add it.

49:

3:33 Press room signs. R-F didn't mask this but maybe that would be better. Also set blur1 but maybe blur 1.2 can also fit. I mentioned that in the comment of the script.

18:49: Book. R-F placement as it moves wasn't that great so tried to make it look slightly better. Also blurred.

51:

2:18: Added blur here since it was near the character moving.

4:13: Individual placement here. Done with help from llbx.

7:59: Was hard to match this but did the best I could. I think bold is a good match.

9:09: Double check scroll. It looks ok but maybe a couple of value change from 125. Like 7:59, bold seems to match slightly better.

52:

Hard episode to do well. Probably some stuff isn't exact but looks ok.

6:15: Did the sign but scrolling needs looked at. Similar to 73 11:17. Have applied blur0.8 to both.

6:19: The fr tags are probably wrong. Scrolling is nearly ok though.

6:28: Sign. Waya moving is annoying. R-F didn't do this well either though.

11:11: I think the scrolling looks ok. The fade in timing was tough. Blur?

11:25: Scroll plus font enlargement here. Seems ok.

11:46: Check placement of text to look cleaner as it moves.

12:11: Is this even a scroll or just constant individual frame placements like I did? Really hard to match but it has the "feel" I think. Added blur0.8 which fits pretty well I think. Note: This appears in the next episode preview of 51 but it doesn't exist on the R-F TV broadcast. The timing is much shorter so left that out as it's a lot of placement for something that doesn't exist.

12:16: Check scroll speed.

14:15: Is frz13 ok? The scroll speed looks good.

15:25: This was such a pain. I tried to group the text with the Actor field to make it easier to track. Not sure about “Chikafuji” and “Gotou” since they start off screen. Added 0.8 blur.

53:

2:45: This is a copy/paste from 52 (also 121 frames). Double check scroll. It seems slightly off by a couple of numbers so if so, also do the same change for 52.

4:07: Font enlargement/placement needs looked at. Not that bad though. I feel like frz-4.5 looks much better. Pretty sure R-F is frz-4 though. Update: Now done with help from llbx.

7:22: blur value? Set 2 which might fit well.

11:47: Small sign with slight moving and font resizing. Couldn't really match this that well though. (llbx then did this)

54:

10:17: Did this but need the sign looked at for placement/scroll.

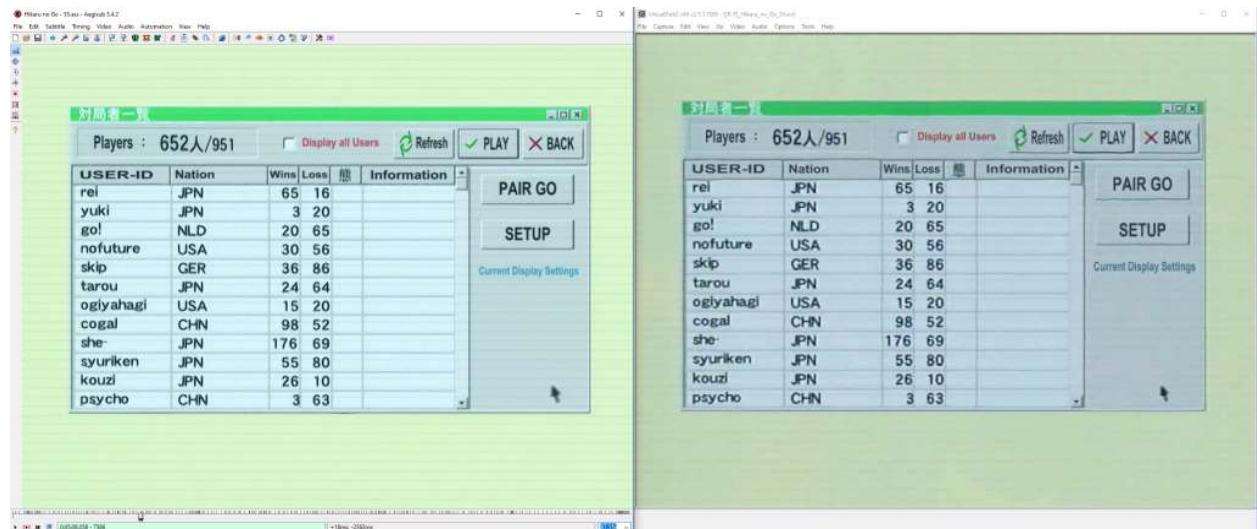

22:34: Are these too fast? I can't tell. The 60 fps might be throwing it off.

55:

One of the hardest episodes to do well but also one of the best episodes in the anime.

3:46: Now done by llbx.

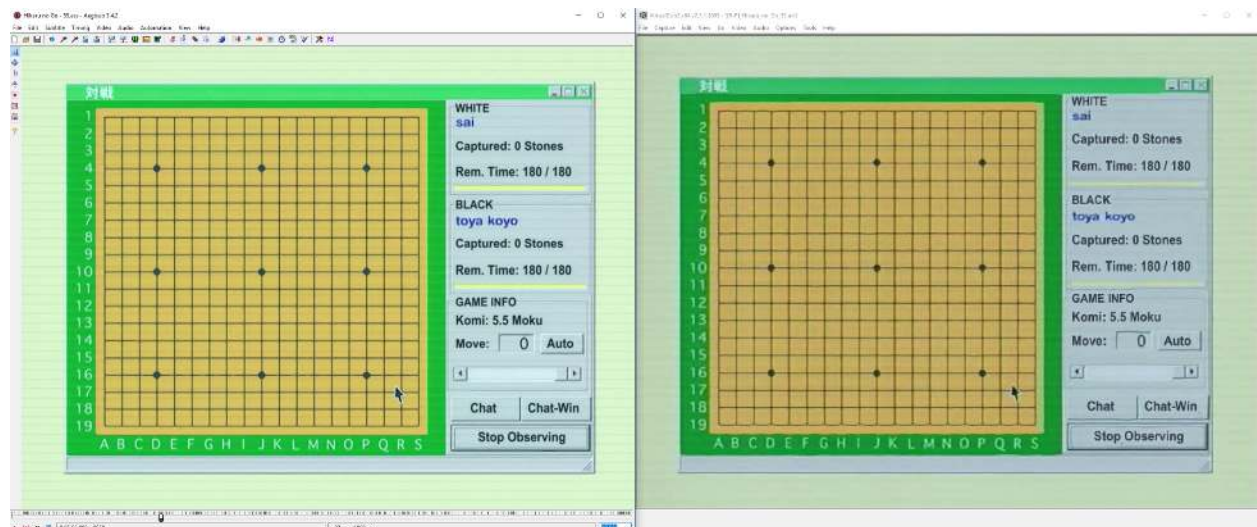

5:08: Tried to box this all. The only thing I'm not sure about is the colour for the boxes. Just had gabest11 colour for now.

gabest11 did 5:40 but the font for “Request toya koyo-san for a game” was wrong. I just cleaned up the fs/fsc tags to properly match R-F via overlay. The boxes are what gabest11 did.

5:52: I think blur2 looks really good here.

5:56: Boxes here from gabest1. blur1 looks good to me as it sort of mimics the screen.

9:34: I didn't know how to properly scroll "WHITE" in time so I just manually did each frame (fixed with help from llbx).

9:40: Of course they changed the zoom here so can't copy/paste 5:56. Like 5:56, gabest11 did the boxes. The "Komi: 5.5 Moku" and some other boxes didn't go down far enough to properly hide so I tried to fix it. Also had to redo the font sizes and fs tags.

9:51: Should this be blur2 since it's closer up to blend better?

Update: After zooming in on some of the boxes by gabest11, you could still see some parts of the text behind it so I tried to fix as many boxes as I could, adding 1 or 2 pixels when required.

56:

4:19: Check fr tags, placement and scroll.

4:22: Is this a shadow? Similar sign to 55: 3:46 so if not, also change that.

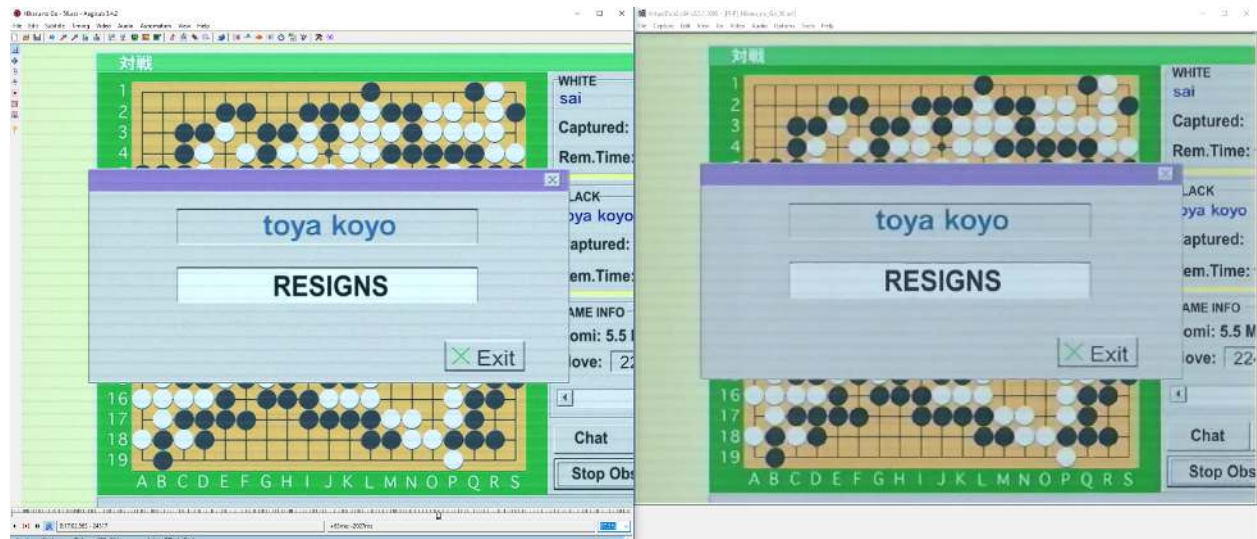

5:35: Not sure if I should extend the box like R-F did. Look ok?

9:59: Is the scroll ok? I can't decide between values of 208-212 etc so I picked 210 for the x movement. It also looks like R-F put some form of like white fade or something to the left of the text as it scrolls but that's getting pretty specific. I set blur2 as it seemed to match the overall feel. White fade done by llbx.

13:54: Tried to do the boxes. Not sure on the colour though.

15:19: Same as 13:54. Colour of boxes ok?

17:01: I'm pretty sure they masked as the "RESIGNS" box comes up. Not the best mask but it matches the edges of how R-F did it I think.

57:

3:56: Hospital sign. Done by llbx.

4:47: Look ok? Maybe off by a couple of values either way on the tags.

17:50: Check scroll. I don't know if it looks good enough.

20:10: Need to animate the timing for the transparency shift for the text as it plays. Starts on "Shindou-kun" line by a little and then goes into "Oh!". I did this but then llbx helped fix.

58:

5:51: Newspaper. This was a tough one. Normally I try to slightly place the sign for Blu-Ray by a couple of pixels but since it was so many individual lines, I just got a near pixel perfect match to R-F and left it. The only line I did slightly change was the bold "Ogata takes the Jyudan title" because if you don't, it doesn't properly cover the text. I commented out the original

line in the script if anyone wants it. The colour choice for bord also might need looked at but I tried 5 different colour picked versions and they all had some problem. I did colour pick something different for the above Ogata line because that also seems to be what R-F did.

7:30: Should these be blurred like 0.5? Honestly makes me think if I should have applied blur to way more stuff but I guess that's not that bad. Have to do it depending. Update: blur0.6 recommended by llbx.

7:43: Needs some slight fr tags done I think (now done by llbx).

12:25: Check scroll speed for all 3 and look at transparency (llbx said it looks ok).

19:49: blurred to 0.8 but not sure. Bolded but not in 73.

59:

4:24: The way the scene fades in makes timing the fade in for the text really hard. It's not perfect but good enough. I set bord2. When doing overlay, bord1.75 might have been slightly closer but probably makes more sense that they did bord2. There's another sign in this episode (Tokyo) also at bord2 that could be bord1.75.

4:28: Hard sign to position correctly. Scrolling also didn't work at all so had to place individually. Done with help from llbx. Don't know if blur0.8 was slightly too much. Maybe blur 0.6?

15:39: R-F is much more zoomed in here so it's really hard to get an accurate position.

16:06: Unsure of the blur value so set to standard 0.8. Also I doubt anybody would ever notice about the bottom left name. "Hom" or "Hon"? It's cut off too much. I don't think it's possible to know.

17:48: gabest11 actually did these lines before but then updated with help from llbx. I think the zoom in (which R-F didn't do) is a nice touch.

18:49: Have blurred to 0.8. The earlier hint to tsumego book in 49 was also blur0.8.

60:

5:13: R-F did some form of gradient on parts of the text here (I think anyway) to more match how the sun shines on the sign. Also likely needs blur. I think the scroll is good but double check. Asked llbx said it looked fine.

5:25: blur these? Have set to 0.8

5:49: Not exactly happy with this but it's really hard to match with how small the text is and the fade in. I tried to recreate the slightly left drift the text has as it fades in. Update: Now done perfectly from llbx.

6:20: This was hard to position correctly because of the fade in. Scroll looks ok.

22:32: I don't know how you would even begin to do this or track it. I did the main text but there's like faded other versions going on. Update: Done with help from llbx.

22:41: No idea how you would do this well. I guess you would have to frx/fry some of the individual letters? I just did a basic fscx scale. Update: Done by llbx.

61:

5:10 Japanese Go Institute sign. Scroll away look ok? Had to individually place and it seems different to TV.

12:17: Shuusaku plaque. Boxes and the box colour maybe needs to be looked at as does blur values. Couldn't get an exact match for text but close.

12:46 Grave of the Honinbou. I think R-F might have done shad2 here but I feel like 1.5 is closer to the text and looks better. Thanks to llbx for doing a great mask.

14:44 Grave then upclose seconds later.

18:31 Okonomiyaki sign. Colour/blur look ok?

19:00 Go Igo Club sign. Wasn't sure about this. Now done with help from llbx. Set to blur1.

20:12 Go Igo Club sign. (Same as 19:00)

62:

1:41: This is a carbon copy of 61 (12:17) so if any changes there, also do here.

2:09: Fix Go Igo club sign. R-F had a more "Grey" outline I guess but the White looks nice as well. Not sure what to do to make the text blend better though. Fixed with help from llbx.

63: 4:51: blur these? Have blurred to 0.8.

64: 20:35 Teacup. This was really hard to do. Don't think this will ever be an exact match but did my best. Individual frame placements seems like the only way but you have to contend with fs scaling along with frz changing. Have blurred to 0.8. I commented out a pretty jittery version similar to R-F and then llbx fixed it up.

66:

5:49: Hagino Incorporated sign. Blur at 0.8 here. Placement/scroll ok?

5:51: Company President's Office. Looks much cleaner than R-F. Pretty sure this is a font resizing. Also set to blur0.8

9:31: Weekdays and Saturdays and IGO SALON sign. Scroll seems bad and fr tags seem slightly off, not sure. Also blur0.8. Transparency here?

67: 22:50: Igo sign needs to be split into 3 (done by llbx).

68:

9:43 Japanese Go Institute sign. Scroll ok?

15:39 Kaiou Private Junior High School sign. I know placement isn't exact to R-F but I think it matches Blu-Ray pretty well. With this placement I just about get away with showing the J as his shoe steps over and removes any needs for super fancy stuff. Also blurred. Shadow made the fade in look too bright but fixed with help from llbx.

16:46 Igo Tournament hall sign. Unsure of colour/blur value but good enough I guess?

16:54: This was hard to match. Pretty sure it's just transparency (also confirmed with llbx). It didn't seem right to colour pick from R-F since it's so low quality to begin with, I just went and searched "dark green hex".

17:06: I know this looks really bad but the scroll is pretty comparable to R-F (e.g: They only applied horizontal scroll so you get to see more of the bottom of the sign as it scrolls past). I did extend the end time slightly more since you can more easily see the fade out on Blu-Ray. I did have this on

bord8 before slightly moved up to hide all the text behind but then the fade out looked really bad. It still looks bad but not that much now.

69:

4:22 McDonalds Hamburgers. Hard to place this properly so I just did something kind of close. Ther scroll from R-F was quite bad here but this happens if you do a move. This was fixed by llbx with individual frame placement.

10:10: Tried to box this as the border method is a definite no. The green makes it hard to match. The first box I have tried to do.

11:28: Add blur? Have set 0.8

17:10: Newspaper. Tough scroll to do well (last 3 frames fixed by llbx). You will notice some text leaks out from the right side but same as R-F. You would have to box this to do better I think. Did they even add any frx/fry tags here? I couldn't tell due to the angle/combination of fscy etc.

71:

3:39: Japanese Go Institute sign. Scroll seem ok? I think it might be off by one value either way.

8:43: Chemistry Lab sign. Scrolling plus font enlargement. I don't think there are any frx/fry tags for this, just basic frz but could be wrong. I know it looks really bad but it's kind of like how R-F did it.

20:20: Names on board, does fade and scroll look ok?

20:26: 2 names on board. Blur works well here right?

72:

6:52: Lots of board text. Not exact positions but easier to read like this. Slight colour changes were hard to match but colour picked from each main sign. Pretty sure the floor signs are all the same colour for R-F though so did that also.

6:56: Up close of board text. Scroll maybe needs looked at. Small change compared to R-F here. I decided to make the bottom floor text match like in 6:52. R-F used the same colour for the whole sign but the bottom of the actual signs are definitely not the same.

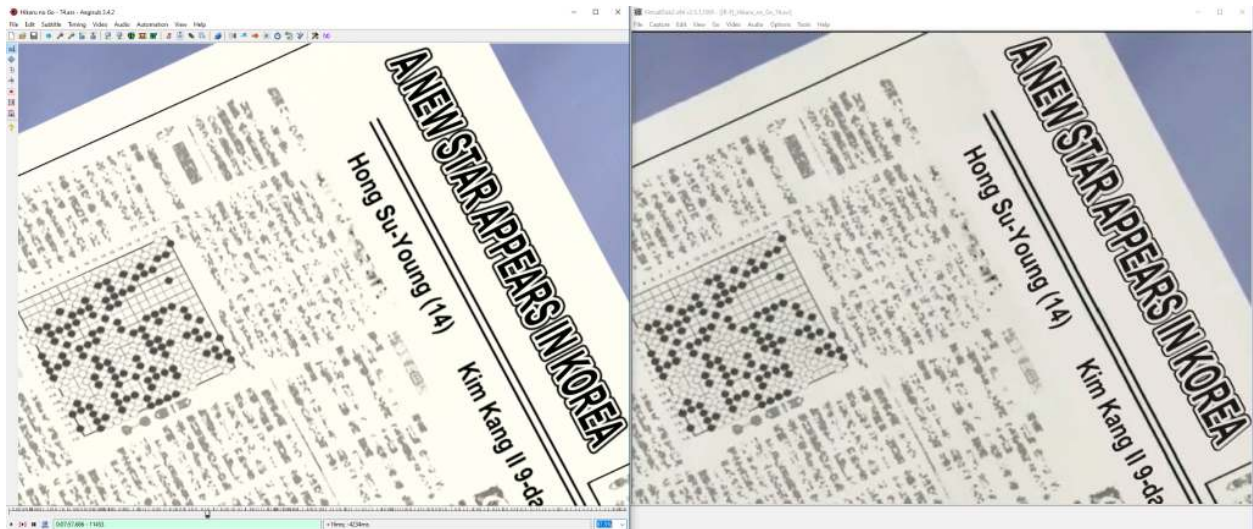

15:46 Japanese Go Institute sign. Trying to match this sign was hard and really, I thought I could do better. I think the addition of the shadow makes lots of sense since the actual sign has it. Not sure on the frz but it seems ok. Thought about blurring this but every other non close up japanese go institute sign on a building doesn't do that.

18:01 China Go Institute. I know this isn't an exact match but didn't know what to do. Set shad1. Seems ok.

73: 11:50 Japanese Go Institute. Done but scrolling needs some work I think. I'm semi happy with the colour picker choice.

74:

7:59 Newspaper. I think I replicated this well enough. To get this effect I duplicated the lines then set bord3 then bord5. Set to blur 0.8 but could maybe be slightly lower not sure. Even asked llbx to make sure.

16:14 Japanese Go Institute. I did consider a shadow like 72: 15:46 but it doesn't have the same impact since it scrolls I think. Also check the scroll.

22:50: Not an exact match to the fade timings of R-F since they did box reveal and I did fade in text method. Update: Fade in timing done by llbx so fine now.

75:

19:00: Morishita sign. I can't tell if this is frx/fry, even on overlay it looked really close without it. I also can't tell if there is a white shadow here? If there is it's like shad2/3 or something? I put on shad1 for now. Also the classic, blur? Now done by llbx.
